

OUR PURPOSE

Building new businesses and systems with Web3 at the core.

Technology fuels a more passionate society.

Refine with logic. Build with passion.

Netsujo provides Web3 and AI business-development support and operates Netsujo SIGNAL, a platform for improving websites as a B2B sales foundation.

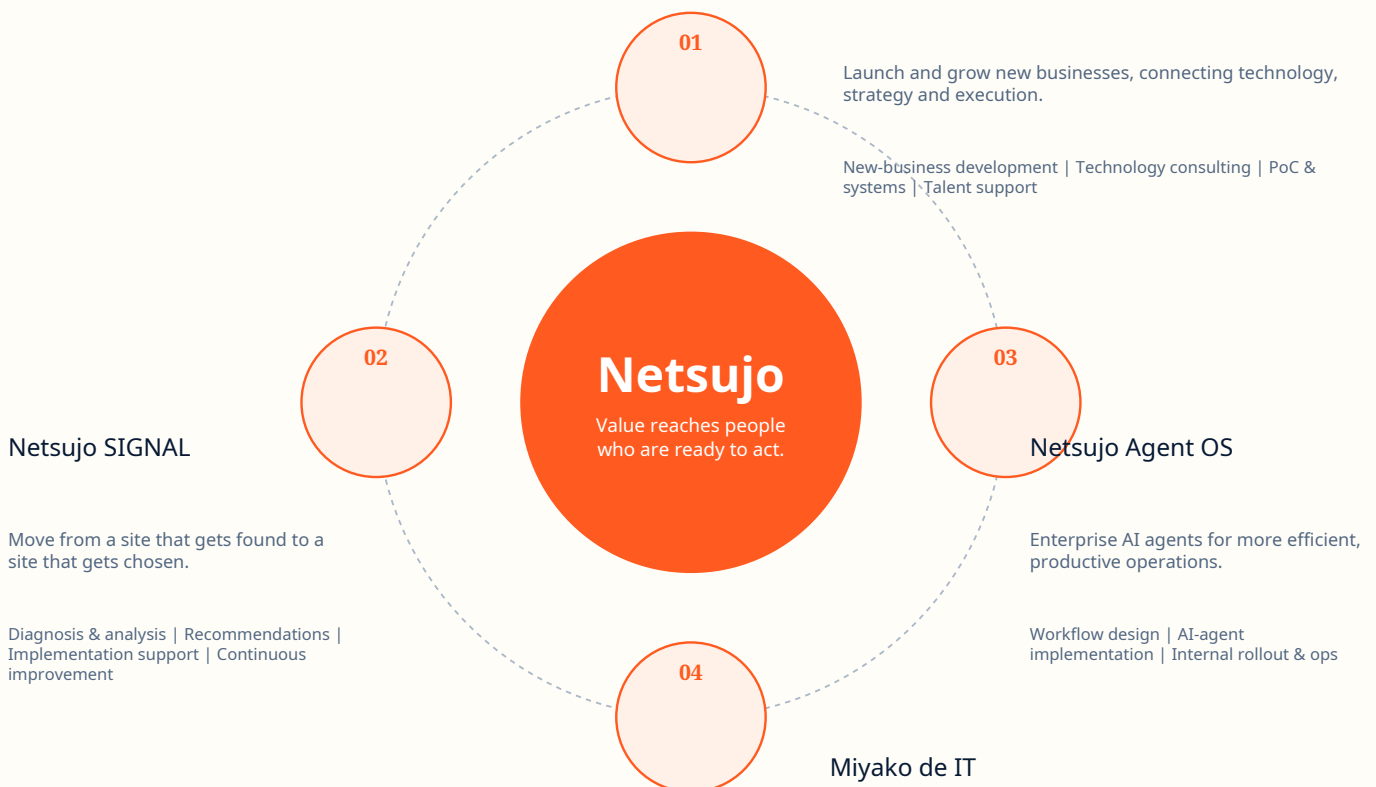

BUSINESS

Building a society where value can be found and understood.

Through Web3 and AI business-development support and our own products, Netsujo helps companies and communities become easier to find, understand, and approach - supporting their next challenges.

Web3 & AI Business Development

**One company. Different entry points.
The same future.**

Business development creates the thing. SIGNAL makes it easier to find and understand. Agent OS and Miyako de IT support sustained growth and real-world implementation.

WORKFLOW

When the person in charge changes, the same record carries the work forward.

We keep judgment and implementation connected, making explicit what must be handed over to the next stage.

What gets handed over

1

Objective

Why are we doing this?

2

Constraints

What must be protected?

3

Acceptance criteria

What counts as complete?

4

Open issues

What still requires judgment?

From results to the next improvement

01

Clarify objectives

02

Decide options

03

Implement what

04

Verify the

Do not leave context only in chat history. Hand it over in a form that lets the next owner make decisions from the same assumptions.

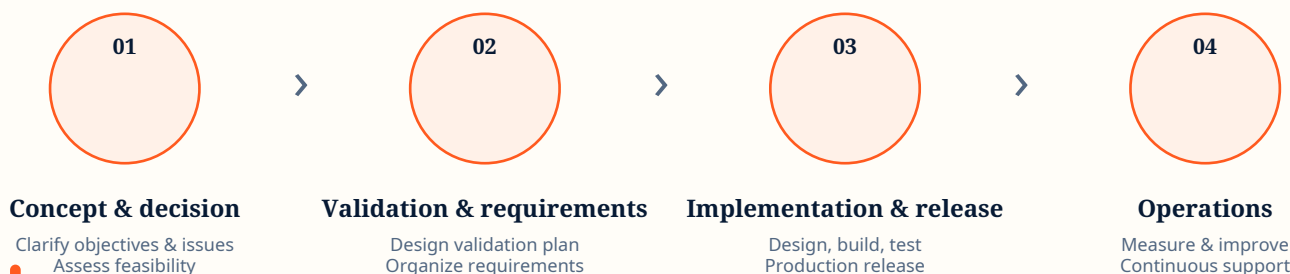

BUSINESS DEVELOPMENT

Design implementation from business requirements - not from technology for technology's sake.

Netsujo structures the business objective, constraints, and validation criteria, then determines the right technology and way forward. We connect the necessary stages from concept through implementation and operations.

How we work

Services and stages covered

Web3 Consulting Concept to technology selection Concept framing / technology selection / sign-off materials	PoC Support Start small. Validate what matters. Hypotheses / KPIs / exit criteria / production decision	Blockchain Development Design and build to requirements. Requirements / design / implementation / release / maintenance	Real-World AI AI grounded in actual workflows. Use cases / ROI estimate / implementation approach	Offshore Development Right delivery model for execution. Delivery structure / quality / implementation
--	--	--	--	---

Fixed-price starting points

Web3 PoC Design JPY 800k 4 weeks	Smart Contract Pre-Engagement Audit JPY 400k 2 weeks	AI Workflow Fit Assessment JPY 300k 10 business days
--	--	--

PUBLIC CASES

We show our track record by the stages we actually owned.

We do not invent client names or outcome metrics. We show only three publicly documented cases, with status, duration, and stages handled.

01

PoC Completed

Approx. 3 months

Finance / RWA

RWA concept framing and requirements definition

Concept framing / issue definition / technical validation / requirements definition / regulatory analysis

Concept & decision Validation & requirements Implementation & release Operations

Supported the project from concept through requirements definition and completed the PoC.

02

Engagement Completed

Approx. 6 months

HR Tech / SaaS

Full replacement of a business application

Requirements / architecture / React Native implementation / data migration / release support

Concept & decision Validation & requirements Implementation & release Operations

Provided end-to-end support from requirements definition through implementation and release.

03

PoC Completed

Approx. 1 year

Web3 Startup

Web3 / NFT

Web3/NFT business launch support

Concept framing / PoC design / sales enablement / local-government collaboration

Concept & decision Validation & requirements Implementation & release Operations

Supported the project from concept through validation and completed the PoC.

SERVICE

Netsujo SIGNAL

Turn your website into a sales foundation.

Get found. Be understood. Build trust. Generate enquiries.

Netsujo SIGNAL does not guarantee search rankings or inclusion in generative-AI answers.

Netsujo SIGNAL

Turn a discoverable website into business strength.

Start with a free assessment

Get found

Search visibility

Be understood

Clear proposition

Build trust

Credibility

Generate enquiries

Action path

1

Get found

Create more opportunities to be discovered through search

2

Be understood

Communicate your business and strengths clearly

3

Build trust

Make your company's credibility visible

4

Generate enquiries

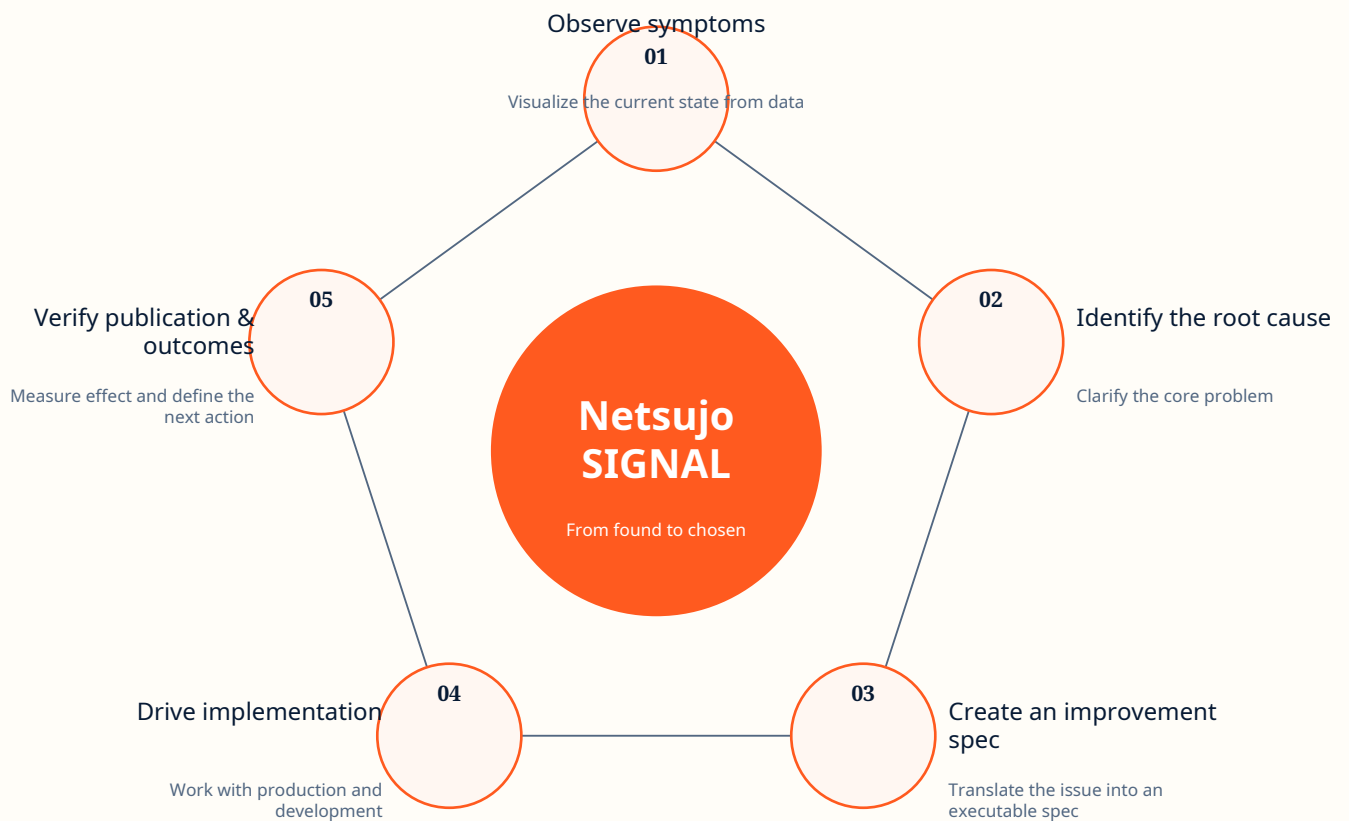

Turn prospects into real conversations

SERVICE

The SIGNAL Improvement Loop

We turn data into a clear view of the current state and continuously improve your site from a site that gets found to a site that gets chosen.

What goes into an improvement specification

We organize the information needed to turn analysis into concrete action.

01	02	03	04	05
Target URL	Location to change	Change & rationale	Completion criteria	Validation method

Netsujo owns diagnosis, evidence synthesis, improvement-spec creation, and measurement. Design decisions, production implementation, deployment, and publication approval remain with the client or production partner.

TECH & COMMUNITY

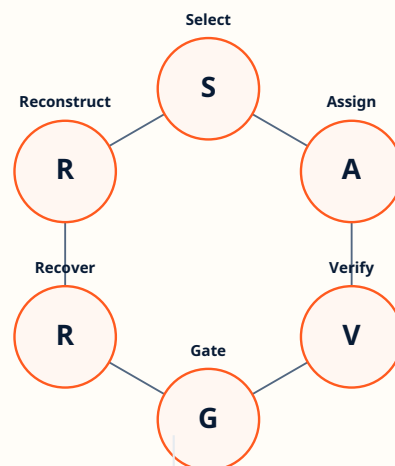

We test it first - in our own development and in the local community.

We do more than talk about methods. We use them in our own development platform, open technology, and community operations - and record what happens.

Netsujo Agent OS

Internal use - Sep. 2026

Having AI write code is not enough to make development autonomous. We run a six-stage control loop in our internal development process.

Approx. 5 months

Operating record since 2026-03-27

2,468

Merged PRs / 8 repositories
As of 2026-09-21 20:24 JST

540

Claude Code sessions
Snapshot as of 2026-09-07

Internal measurements, not third-party-audited benchmarks. These are dated observations, not current values.

Open technology

Build it, then share it openly.

VALUE

Our four values are decision criteria for how we work.

These are not abstract slogans. We use them in real projects as criteria for what to choose and how far to take responsibility.

1

Passion

Stay with important problems through to the destination we have agreed on.

2

Autonomy

Choose by purpose, evidence, and ethics - not by trends or titles.

3

Ownership

Make the next move, and the responsibility we take on, explicit.

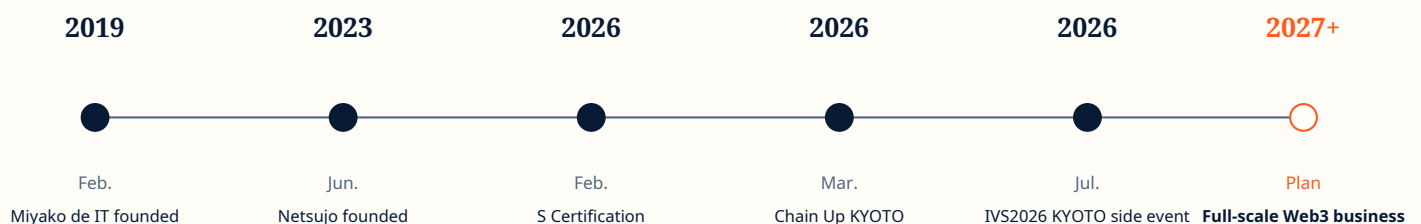

4

Mutual Respect

Respect differences in expertise and roles, and move forward together.

Where we've been, where we're going

Building on what we have achieved, we move into the next stage from 2027.

From 2027 onward, we will make Web3 new-business development a core focus again. Our commitment as a Web3 startup has not changed.

CONTACT

Two ways to start a conversation.

Choose the route closest to what you want to move forward now: building a business, or diagnosing and improving your website sales.
